PRONAR

Pronar is one of the fastest growing Polish companies. Its machines support the daily work of farmers, municipal companies and the waste industry in over 80 countries around the world. The brand, which has been built for over 30 years and is still based solely on Polish capital, has also become synonymous with quality and stability among component suppliers. Board profiles, pneumatic and hydraulic elements, axles and drive sys-

tems as well as Pronar disc wheels are installed in the machines of the world's largest concerns. In the field of production of rims for low-speed machines, reaching a million pieces per year, the company is currently the European leader and the world's vice-leader.

Pronar that is the largest domestic manufacturer of agricultural, municipal and recycling machines, already employs over

3,000 employees, and at the current pace of development, the company will soon need several hundred more. Machines and components are manufactured in nine factories located in six towns in the Podlaskie Voivodeship: Narew, Narewka, Hajnówka, Strabla, Siemiatycze and Białystok. Together, all of those plants process around 10,000 tons of steel per month.
